Passwords Reset

, Friday 20 January 2012 - 16:20:50

P/FTP/SSH PASSWORDS HAVE BEE

Due to a possible breach of DreamHost's databases, all passwords have been reset (by dreamhost) as a precautionary measure. You may be able to access it now, but it will be reset the next time cron runs. This means that all accounts hosted by fsmods will need to be given new passwords. Here's what I need all of you to do:

1.) Send me an e-mail at achtung@nukelol.com with the subject "FSMods Account Password For project_name_here"
2.) Tell me what account it is for (I have e-mail addresses to reference for most accounts, I will make sure you are who you say you are.)
3.) Tell me if you want a specific password (totally optional).
3.) I will reply to you with the new password.

Sorry for the inconvenience, but this is out of my hands.
